

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1-46. (Canceled)

47. (Currently Amended) A method of transferring requested media data over a network comprising:

receiving a request for media data from a client device;

sending a detection code to the client device;

detecting, at the client side, the media player information available on the client device by the detection code;

storing, at the client side, the media player information in one or more cookies;

fetching the requested media data; and

transferring the requested media data suitable for the detected media player information to the client computer over the network.

48. (New) The method of claim 47, where in the media player information includes one or more media player types available on the client device.

49. (New) The method of claim 47, wherein the media player detection code comprises logic for a string search of mimetype.

50. (New) The method of claim 47, further comprising storing the detected media player information on the client device.

51. (New) The method of claim 47, further comprising conducting bandwidth measurement.

52. (New) The method of claim 47, wherein the suitable media data is transcoded based on the detected media player information.

53. (Currently Amended) A method of receiving media data over a network, comprising:
requesting media data;
receiving a detection code at the client device;
detecting, at the client side, media player information available on the client device by the detection code;
storing, at the client side, the media player information in one or more cookies;
sending the detected media player information to a server; and
receiving the requested data suitable for the detected media player information at the client device.

54. (New) The method of claim 53, wherein the media player information includes one or more media player types available on the client device.

55. (New) The method of claim 53, further comprising storing the detected media player information on the client device.

56. (New) The method of claim 53, wherein the media player detection code comprises logic for a string search of mimetype.

57. (Currently Amended) A method of transferring media data over a network, comprising:

- receiving a request for media data from a client device;
- sending a detection code to the client device;
- receiving from the client device the media player information available on the client device;
- storing, at the client side, the media player information in one or more cookies;
- fetching the requested media data; and
- transferring the requested media data suitable for the detected media player information to the client computer over the network;

wherein the media player information is detected at the client device by the detection code.

58. (New) The method of claim 57, wherein the detected media player information is stored on the client device.

59. (New) The method of claim 57, wherein the detected media player information includes one or more media player types available on the client device.

60. (New) The method of claim 57, wherein the media player detection code comprises logic for string search of mimetype.

61. (Currently Amended) A method of transferring media data over a network, comprising:
receiving a request for media data from a client device;
sending a detection code to the client device;
receiving from the client device the detected media player information available on the client device;

storing, at the client side, the media player information in one or more cookies;

fetching the requested media data;
transcoding the requested media data based on the detected media player information;
and
transferring the transcoded media data to the client device over the network;
wherein the media player information is detected at the client device by the detection code.

62. (New) The method of claim 61, wherein the detected media player information includes one or more media player types available on the client device.

63. (Currently Amended) A method of remotely determining the media player configuration of a device, the method comprising:

sending a media player detection script to the device;

detecting the media player information available on the device by the detection script;

and

storing the media player information in one or more cookies; and

receiving the detected media player information.

64. (New) The method of claim 63, wherein the media player detection script comprises logic for a string search of mimetype.

65. (New) The method of claim 63, wherein the detected media player information includes one or more media player types of available on the client device.
